*You may be  
wondering ...*

## **Why Skilled Crafter?**

In 2014, inspired by the idea of convenience, efficiency and durability, Skilled Crafter began manufacturing craft products such as the Craft Magnets. They were designed and sized to appeal to many crafters for many different projects.

Our desire was to make the crafting experience a very satisfying one ... and that's why I wrote this guide. In this PDF, you will learn how to best use these magnets, the thought we put into them, and all the possibilities for their use ... so that you will LOVE the experience of using them in your craft!

## **Connect with Us**

We love to connect with fans of Skilled Crafter. We would love it if you would join our special VIP Club to stay connected:

# Why You're Going to Love Your Skilled Crafter Magnets!

*You've made a great choice, and here's why.*

You ordered these because you wanted reliable magnets that have strength and the best quality ... that are the neatest size for many possibilities and at 100 in a box are the greatest value... and that's exactly what you got!

In short, you're going to LOVE the results when you use these. So, why don't I explain ...

# Here Are a Few Great Things That Your Skilled Crafter Magnets Will Do For You!

1. The moment you take your magnets out of the box you will see and feel the quality, how neat they are and how they will enhance the work you want to use them for.
2. These magnets are Grade 5 strength, so although they are small they are mighty! One will comfortably hold 8 sheets of 80gm A4 paper on a magnetic board.

3. The 20cm diameter sized magnets are ideal for many craft projects.

If you love creating hand crafted novelty fridge magnets these are a great size for the purpose. They can be fixed with many different types of glue.

4. They are perfect for many home applications too. Use them to simply and efficiently hang a length of fabric across a window. This look is beautiful and sleek and is the easiest solution when you want to cover a window permanently or temporarily.

Paint the magnets you fasten to the frame the same color as the frame so they are not noticeable. Sew magnets in to the hem of the fabric on all 4 corners.

This would also work for a door screen.

5. Having a garden party? Weight down your tablecloths so they stay in place and don't fly off in a breeze. Glue or sew the magnets around or in the hem. You could even glue magnets to the table so the cloth can be fixed in place.

6. Create a cool feature wall that will be very unique and personal.  
Paint a wall with magnetic paint and display your favorite pictures, postcards and trinkets. You can also paint the magnets a contrasting color to really make it fun.  
Enamel paint works well on magnets because it is strong and has an attractive gloss finish but they will take many different types of paint effectively and can be varnished with water or oil based varnishes.

7. Doing some DIY? Never lose your screws again! Make a wrist band out of a length of folded over fabric and use Velcro or your magnets as a fastener to fit securely around your wrist.  
Sew or glue magnets inside the fold and you have a handy holder for screws and nails and small metallic objects within easy reach, that you won't need to put down and lose.

8. Make a unique and professional looking 3D Medal Display. A fantastic gift idea for the gymnast in your family, or the athlete, or chess player or... the list goes on...  
Simply remove the glass from a picture frame and glue the magnets in an attractive formation on the backing board. Now you can arrange your magnetic medals on the display and swap them around whenever you like.

I hope you like our ideas. There are so many more that we could easily write a book!

**But why don't we let the experts we admire give you some more inspiration:**

Now that you have some ideas for your magnets ...

I bet you'd like to know how to get the best possible results from them ...

# How to Get the Best Results When Using Your Skilled Crafter Craft Magnets!

*Here's how to get the best results using your new magnets...*

1. Be aware that ceramic/ferrite magnets are brittle and will break or chip if dropped or banged. So they need to be handled with care.
2. They can be painted and varnished and can be decorated to suit their use.
3. They can be used with most types of glue; including hot glue, water based glue, Liquid Nails, Goop, Bond 527 and epoxies etc.
4. Ferrite magnets have a high resistance to demagnetization, corrosion & oxidation and can be used outdoors and in water.

## Warnings

1. Ingestion or inhalation may cause injury or death.
2. Choking Hazard – Keep away from small children.
3. These are not toys.
4. Do not use if you have a pacemaker or other medical device that could be affected by magnetism.
5. Do not drill or machine unless you are experienced and have the correct diamond tooling equipment, coolant and good ventilation, as they could ignite and the fumes are toxic.
